

New members and kicking off our Green Growth project

As everyone manages to get some time off over the summer, catch up with the latest news from Advanced Oxford. We'll look forward to reconnecting in September - hopefully not just via a computer screen!

New research project on Green Growth is underway

Climate change is one of the most pressing challenges of our time. The UK has a great reputation for science and engineering research and finding ways to transform this into innovative technological solutions. There are many examples of Oxfordshire based companies that are developing technology that will help us to transition to a low carbon, more sustainable economy.

Advanced Oxford's next research report will look at how Oxfordshire's science and technology businesses, campuses and academic infrastructure are contributing to this agenda.

As the economy looks to move to a recovery phase, following the economic shock of Covid-19, there is an active debate about the need to embed environmental policies into the recovery plan, i.e. to drive a green economic recovery. Our research will look at what needs to be done to support growth and will assess how these types of innovative companies can be at the heart of a post-Covid, green recovery.

What our research project will do:

Characterise the growing cluster of Oxfordshire-based companies developing ground-breaking work to help solve a pressing global problem. Map capabilities and support available to accelerate growth and collaboration.

Provide insight and recommendations in support of growth. We anticipate that the report will provide evidence that can be used to shape thinking around how Oxfordshire can engage inward investors and attract new industrial players and risk capital investment into the region.

Build a Directory of Oxfordshire-based or located businesses. The Directory will provide visibility to peers and to decision makers. It will support companies to find potential collaboration partners and to build their network.

Advanced Oxford membership news

We are delighted to welcome Carter Jonas and The Oxford Science Park into our membership at this time. Both organisations have a long-track record in providing the infrastructure and places that allow commercial science to flourish within the Oxford region and they both bring great expertise to our work.

Carter Jonas

Advanced Oxford's paper on post-pandemic economic recovery

Our paper on post-pandemic economic recovery has been shared with policy makers and with the House of Commons select committee for business, energy and industrial strategy. Some of the content also informed the Oxfordshire LEP Innovation Group's submission to BEIS on the R&D roadmap. Advanced Oxford is represented on the Innovation Group by Sarah Haywood, Jane Galsworthy and Barbara Ghinelli. Thank you to everyone who contributed their policy thoughts and views
